

Claims:

1. A razor blade holder, comprising:

(a) a first non-magnetic housing, having a front side, the housing including an upper wall and a lower wall, the housing defining a channel opening outwardly along the front side and a slot extending across the lower end wall, and

(b) at least one magnet embedded in the housing for removably holding a razor blade in the channel and slot against the front side.

2. The razor blade holder of claim 1 which further comprises:

a pair of opposed sidewalls integrally formed with the housing and the lower end wall,

the sidewalls cooperating with the front side of the housing to define the channel.

3. The razor blade holder of claim 2 which further comprises a U-shaped outer peripheral wall integral with side walls and the housing.

4. The razor blade holder of claim 1 which further comprises:

a keeper, the keeper comprising a second non-magnetic housing and at least one magnet secured to the housing, the magnet being attractable to the at least one magnet of the first non-magnetic housing.

5. The razor blade holder of claim 4 which further comprises:

(a) a pair of magnets secured to the second housing, and

(b) a pair of magnets embedded in the first housing.

6. The razor blade holder of claim 5 wherein each magnet is a neodymium magnet.
7. The razor blade holder of claim 1 wherein the magnet is a neodymium magnet.
8. The razor blade holder of claim 1 wherein the front side comprises a lower substantially planar portion and a curvilinear upper portion extending from a terminus of the lower portion and the upper wall, the terminus defining a fulcrum.
9. The razor blade holder of claim 1 wherein the housing has at least one socket provided therein, the magnet being retained in the socket.
10. The razor blade holder of claim 9 wherein the housing has a cut-out portion for facilitating grasping of a razor blade.
11. A method of removing storing a razor blade about the body of a user in a razor blade holder which comprises:
 - (a) placing a razor blade in a housing of the holder;
 - (b) disposing the housing in contact with a first side of a garment;
 - (c) placing a keeper of the holder in juxtaposition with the housing on the opposite side of the garment, andwherein the razor blade holder comprises the razor blade holder of claim 4.
